

Kevin Lee

(201) 377-8065 | kevin.ghlee@gmail.com | Emerson, NJ | linkedin.com/in/kevin-ghlee | kevinghlee.me

Education

Dartmouth College

B.S. Computer Science • GPA: 3.77 • Cum Laude (2023, 2024, 2025)

Hanover, NH

Sep 2023 – Jun 2027

- **Coursework:** Machine Learning & Statistical Analysis, Cybersecurity, Full-Stack Development, Software Design & Implementation, Algorithms, Discrete Math, Quantum Mechanics

Experience

AI Quality Analyst (Contract) – Google Gemini Personalization

Remote

Turing

Jun 2026 – Present

- Evaluate Gemini’s personalization system for the Korean locale, designing prompt suites across explicit-source, implicit, and multi-turn cases that stress how the model retrieves and reasons over a user’s Gmail, Maps, Search, and YouTube context.
- Read per-response retrieval debug traces to isolate failures as retrieval-side (no relevant source returned) versus generation-side, and file structured, reproducible findings that route into model quality fixes.
- Deliver side-by-side model comparisons with written rationale under a two-strike QA review process; maintain a top automated quality score on submitted evaluations across consecutive batches.

Software Engineering Intern

Englewood, NJ

Hiossen Implant

Jun 2025 – Sep 2025

- Shipped a production AI agent built on retrieval-augmented generation, few-shot prompting, and structured reasoning chains (Python, LangChain), serving 43 end users across 4 product modules.
- Raised response accuracy from 68% to 89% and cut human escalations by 32% across 1,200+ monthly queries by redesigning the retrieval and reasoning pipeline end to end.
- Built full-stack integrations connecting interactive 3D interfaces (Three.js) to ML-backed services, owning the work from ideation through production launch.

Software Co-Head (previously Software Engineer)

Hanover, NH

The Dartmouth

Sep 2023 – Present

- Launched a production analytics dashboard (React, TypeScript) tracking 500K+ monthly impressions across 30+ ad placements, adopted by 18 non-technical staff for daily decisions.
- Designed Node.js REST APIs ingesting external partner data into MongoDB, improving ad placement optimization by 14% and automating manual reporting workflows.
- Lead the software department: own CMS and site releases, and built a Python scraping pipeline that enriched the alumni directorate database now used for outreach.

Undergraduate Researcher – Network Security

Hanover, NH

Dartmouth College (URAD)

Sep 2024 – Present

- Building a real-time DDoS detection and mitigation pipeline for esports and online gaming platforms, engineering sliding-window traffic features over synthetic and public attack datasets.
- Benchmarked unsupervised anomaly detection against supervised classification baselines, then validated mitigation strategies in an emulated network environment.
- Extending the system with an attack simulation testbed generating traffic modeled on live multiplayer conditions; two-time URAD Research Honor Award recipient.

Research Intern – SQRL Lab

Newark, NJ

New Jersey Institute of Technology

Jun 2023 – Sep 2024

- Raised concussion screening accuracy from 78% to 94% on the OMAT diagnostic tool by automating MRI/fMRI/DTI preprocessing pipelines (Python, FSL) for eye-movement and memory signal analysis.
- Built Android visualization modules (Kotlin, WebView, JavaScript) for interactive brain imaging slice navigation, still in use in ongoing lab research.

Teaching Assistant – CS 50 (Software Design & Implementation)

Hanover, NH

Dartmouth College

Sep 2024 – Present

- Support 200+ students in C systems programming across 30+ weekly debugging sessions covering memory management, data structures, and socket networking.

Projects

Glacis – Edge Defense Console | HTML, CSS, JavaScript

2026

- Designed and shipped a single-file operator console for game infrastructure: live attack telemetry, mitigation policy controls, and incident timelines, published with a companion product case study.

GroupTrip.ai – AI Collaborative Trip Planner | TypeScript, Node/Express, MongoDB

Co-Leader

- Built a full-stack app from 0 to 1 with real-time collaborative dashboards, day planners, and live chat.
- Designed an autonomous GPT-4o-mini agent with function calling that executes structured actions from natural language, grounded in live application context and user preferences.

Technical Skills

Languages: Python, TypeScript, JavaScript, C/C++, Java, Kotlin, SQL, HTML/CSS, Bash • *Spoken:* English, Korean (both native)

Frameworks & Tools: React, Node.js/Express, Three.js, LangChain, MongoDB, Docker, Git, REST APIs, Tailwind CSS, Linux/Unix

Domains: Networked & Distributed Systems, Network Security, AI Agents & RAG Pipelines, Machine Learning, Full-Stack Development
